

353124A Bearing

Distributor Bearing Wholesalers Inc supports farmers and equipment manufacturers in their efforts to feed the world, providing products and services designed to deliver high performance, extend equipment life and enhance productivity.

Precision tolerances – meet ABEC 5F (ISO P5) or ABEC 7F (ISO P4) for high running accuracy.

Material selection – standard offerings include 440C stainless steel and 52100 chrome steel.

Superfinished raceways – provide a smooth surface finish to reduce internal friction and vibration.

High quality ball complement – grade 5 or better balls optimize smooth rolling performance.

Retainers – various configurations and materials to meet performance needs.

Self-contained, pre-assembled and pre-lubricated

Reduces maintenance costs, increases miles per bearing and fuel efficiency

If you know heavy mining equipment, you already know 353124A Bearing We've been a top OEM supplier to the industry for five

decades running. And along the way, our 353124A Bearing- and BB products have become the global standard for custom-designed bearings in mining trucks and excavators. Distributor Bearing Wholesalers Inc's newest innovations build on this legacy by taking performance to new heights—delivering the quietest, coolest and highest-capacity bearings in the market.

353124A Bearing engineers never stop pushing the boundaries of performance. Case in point: Our new-generation 353124 series—addressing end users' needs for maximum possible output and durability in the most severe applications. These large-bore taper, cylindrical and spherical bearings are built to withstand the environmental risks that heavy-duty surface mining equipment demands. Delivering the ultimate in performance, 353124A Bearing combines special alloys capable of 200°C continuous ambient temperatures with an optimized roller complement and retainer design—enabling the highest load capacity and allowable speed for a given bearing type and size.

You'll find 353124-engineered bearings inside everything from giant haulers to draglines, electric rope shovels to drills, pulverizers, conveyors and beyond. That's because our OEM partners can count on us to engineer more long-lasting reliability and durability into their critical surface mining equipment—so that you can achieve greater throughput, less unplanned downtime and easier preventative maintenance.
